

Hey, I'm

Amar Nath

Web Developer

ABOUT ME

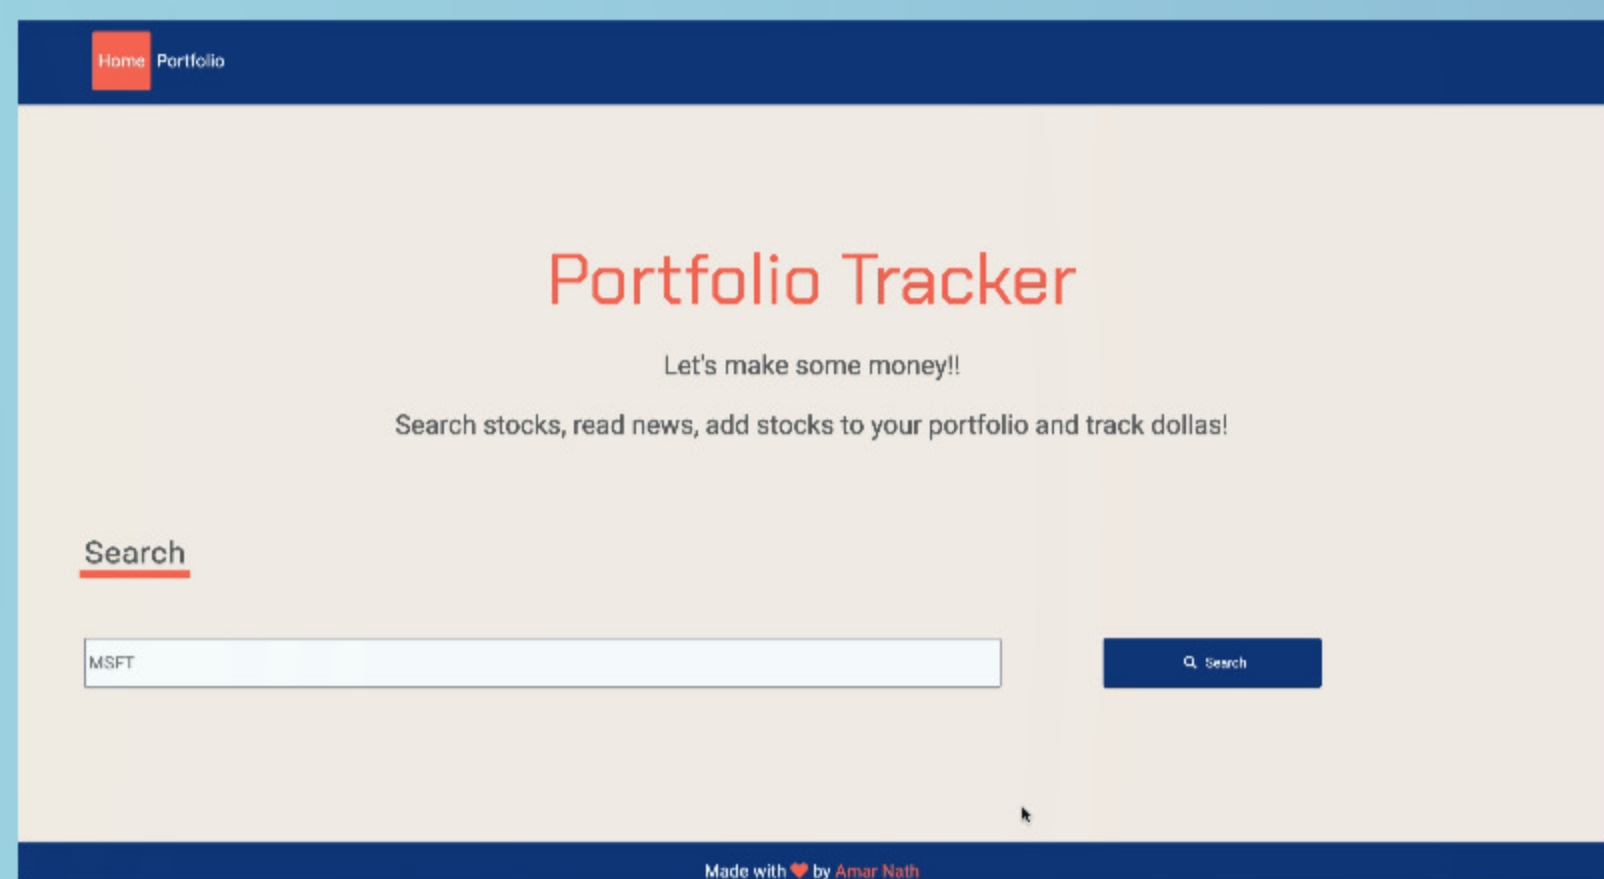

I'm a data scientist turned developer with a background in mathematics.

I have 2 years experience developing tools in Javascript, React, Python and Django. I have built REST API solutions, interacting with databases, performing user authentication, managing session storage as well as unit testing my apps and optimizing for performance.

I want to combine my problem solving skills with design to build intuitive, accessible solutions that impact and empower people.

PROJECTS

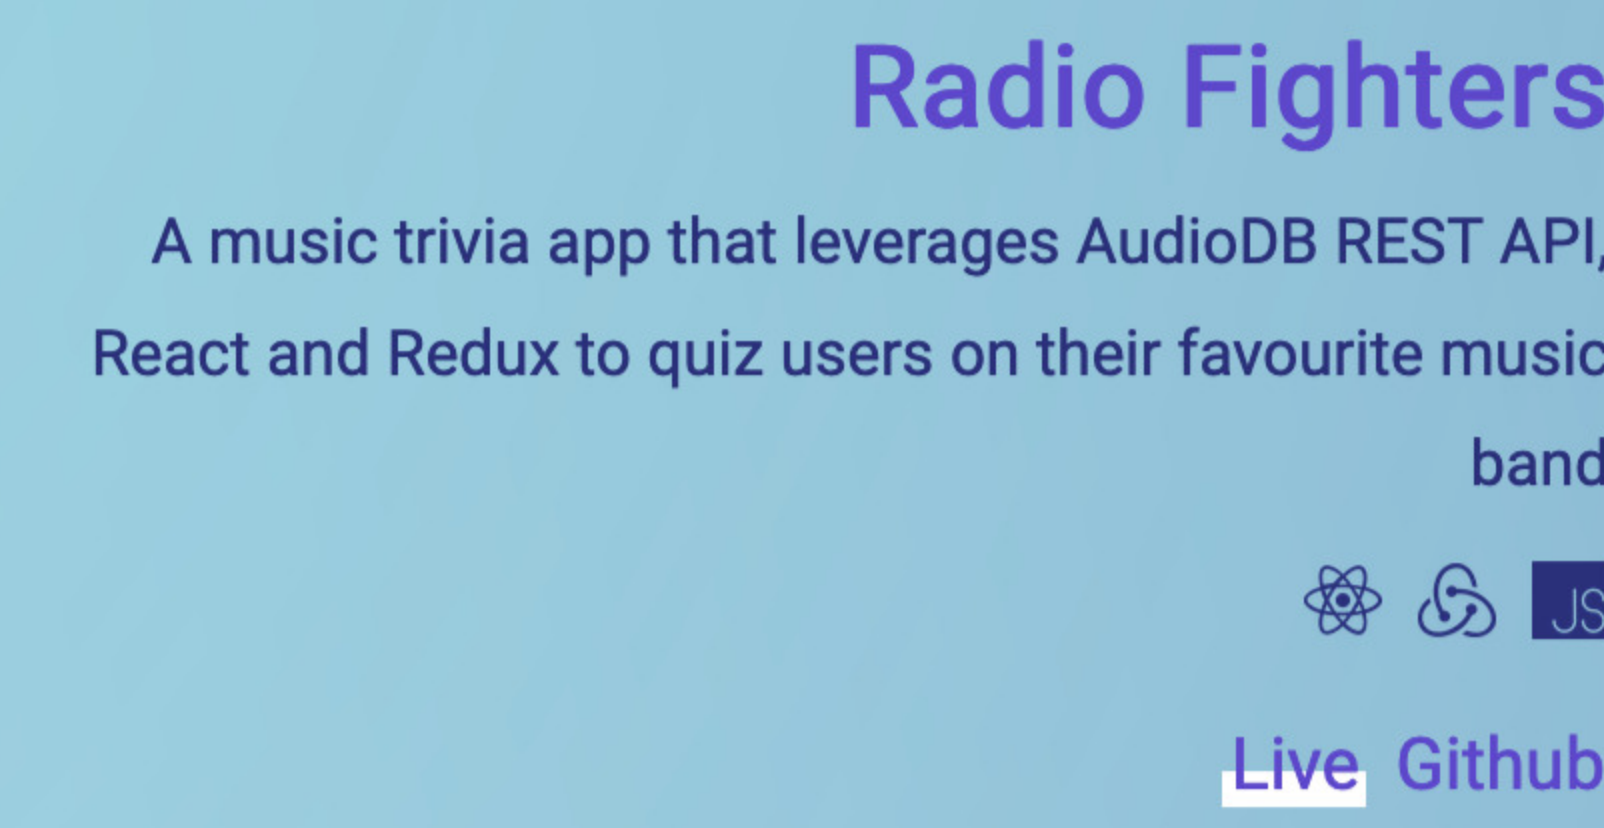

Portfolio Tracker

A stock portfolio tracker that uses Yahoo Finance REST API, postgres database to allow users to create a stock portfolio and track return over time

[Live](#) [Github](#)

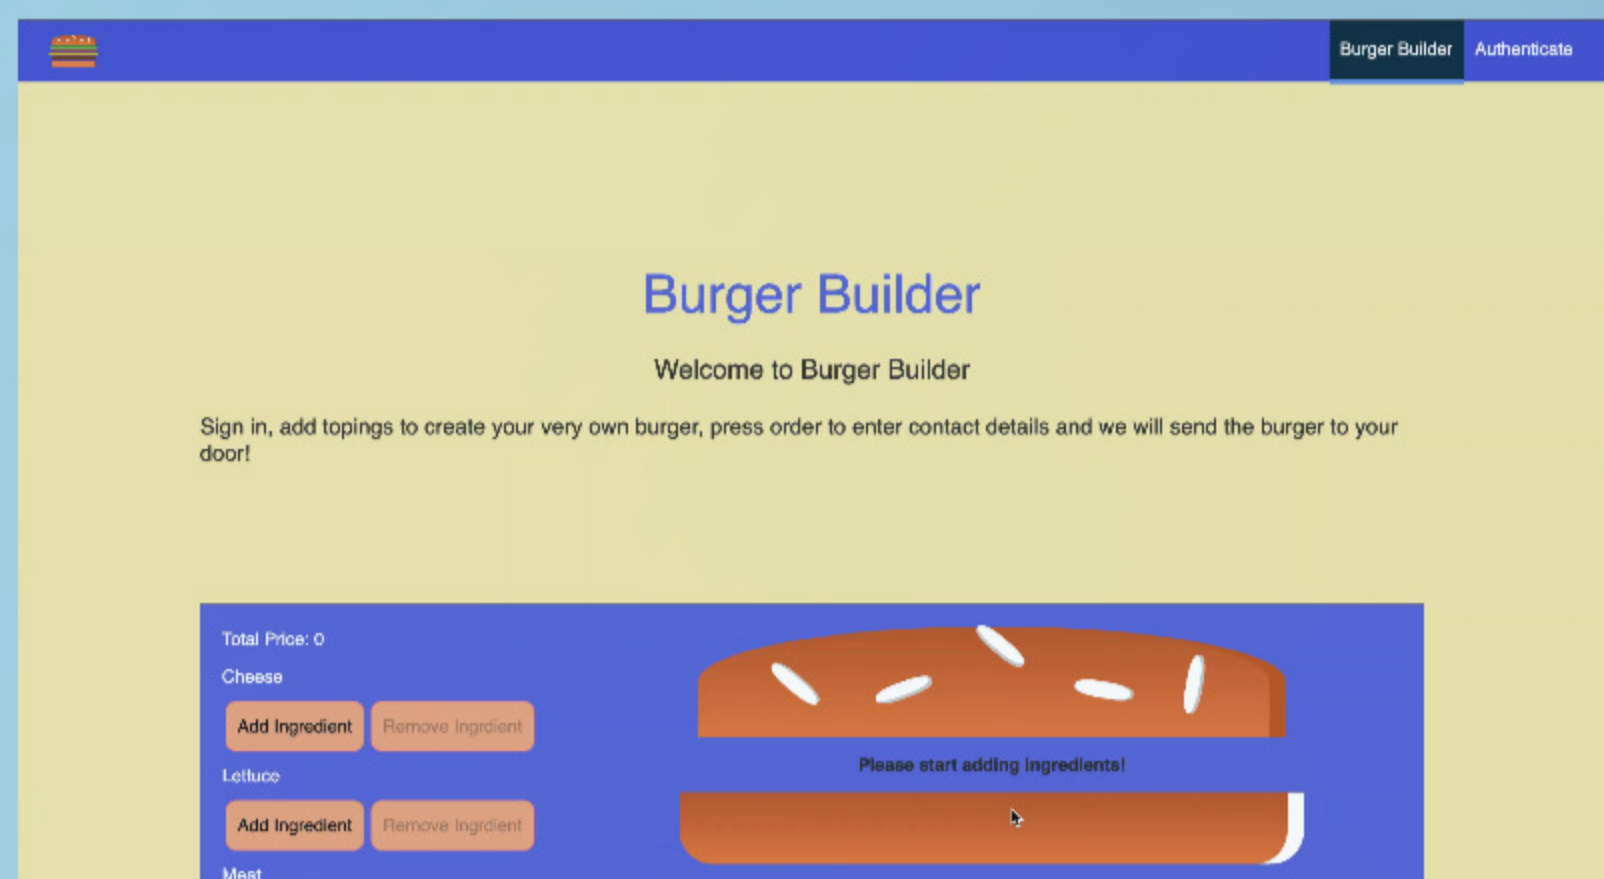

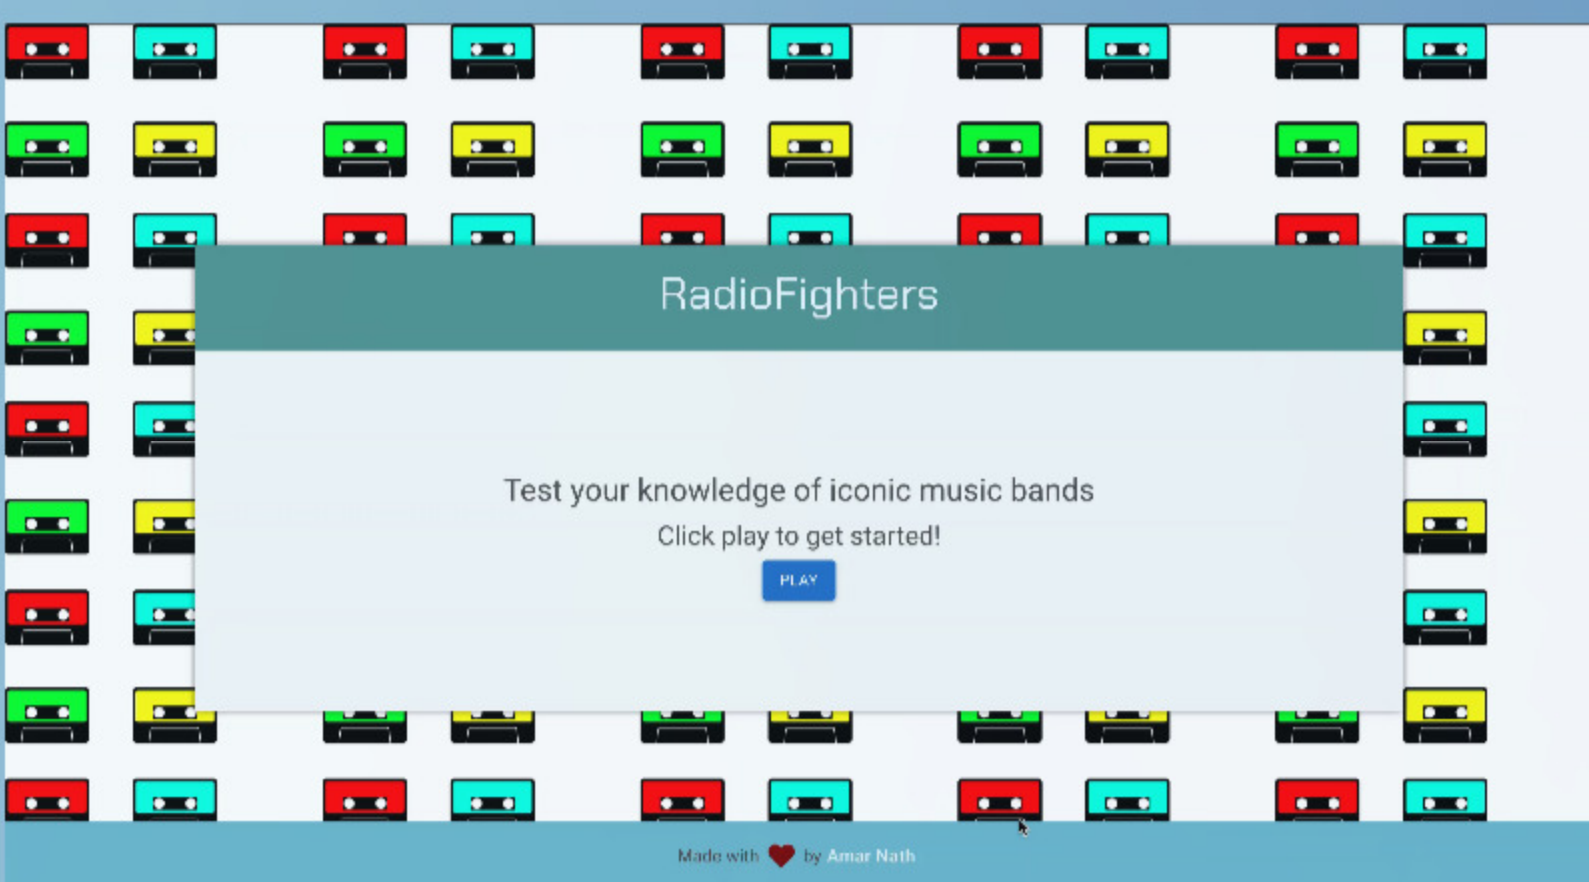

Radio Fighters

A music trivia app that leverages AudioDB REST API, React and Redux to quiz users on their favourite music band

[Live](#) [Github](#)

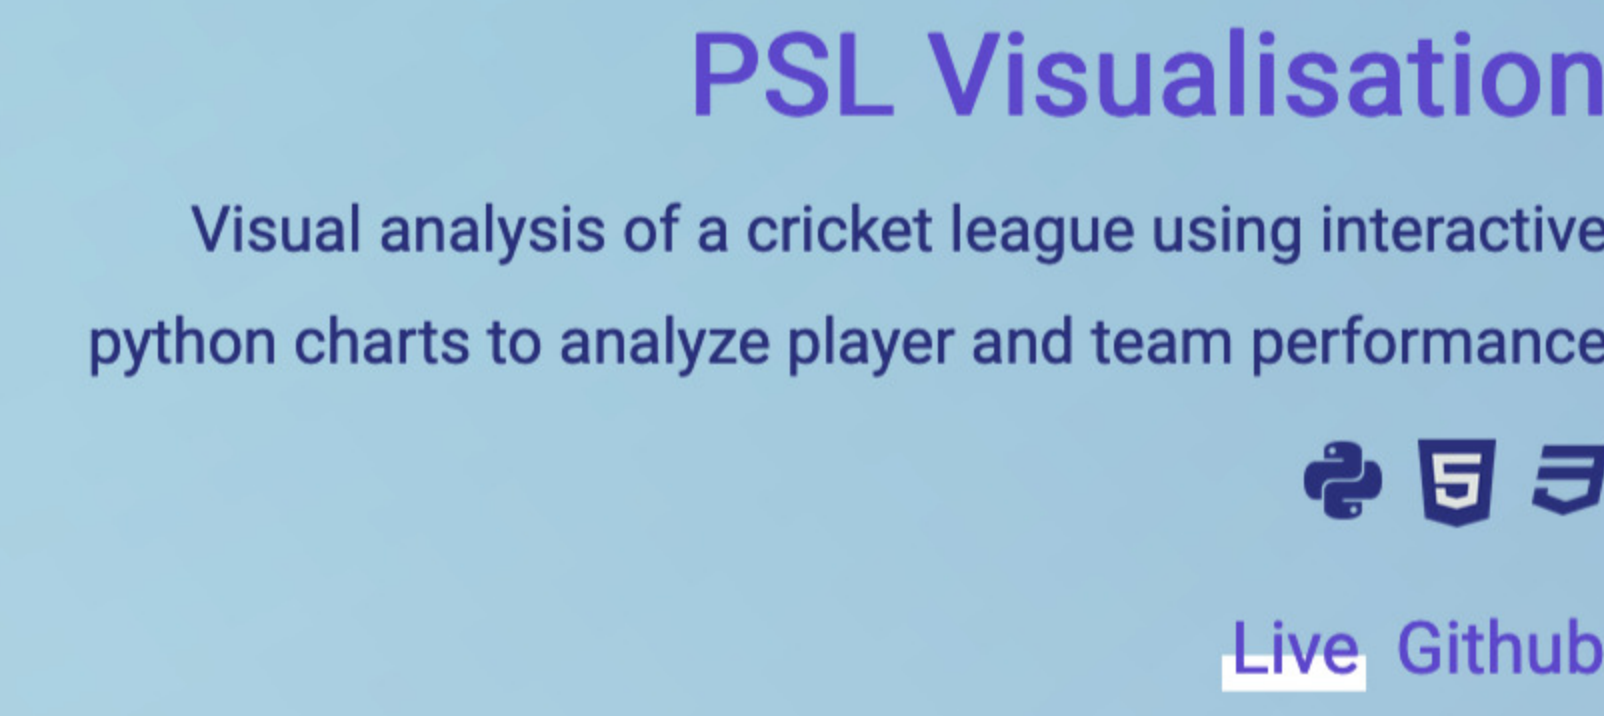

Burger Builder

A React App that allows users to customize and order a burger. Firebase authenticats users and saves their order details in Realtime database

[Live](#) [Github](#)

PSL Visualisation

Visual analysis of a cricket league using interactive python charts to analyze player and team performance

[Live](#) [Github](#)

Homecooks

This concept food delivery app is a responsive mobile-friendly React app inspired by home food delivery app Chef
